SELECTED REPORTABLE DISEASES

Reportable Diseases incidence in Van Buren and Cass Counties is included on page 2. This is a five year report for both counties combined.

Our Chlamydia and Gonorrhea rates remain high. The apparent Campylobacter increase is most likely due to recent enhanced testing by some labs. Varicella remains primarily reported by individual cases through the schools. The majority of cases are mild.

We have not had significant foodborne illness outbreaks (thankfully!). Hepatitis C remains our most frequent chronic infectious disease.

DENTAL CLINIC SERVICES

Oral Health is an essential factor in remaining healthy. The Van Buren/ Cass District Health Department’s Community Dental Clinic is here to help! With low cost services available at our Hartford or Dowagiac facility. See page 3 for dental service information or you can go to our web site at www.vbcassdhd.org.

RABIES POST EXPOSURE PROPHYLAXIS NOW REDUCED BY ONE DOSE

This series of injections has been reduced from five to four. A regimen of 4 one-ml vaccine doses of rabies vaccine (HDCV or PCECV) should be administered intramuscularly to previously unvaccinated persons with no immuno-suppression. The first dose of the 4-dose course should be administered as soon as possible after exposure. This date is considered day 0 of the post-exposure prophylaxis series. Additional doses should then be administered on days, 3, 7, and 14 after the first vaccination. Considerations for the site of the intramuscular vaccination remain unchanged. The recommendations for use of immune globulin remain unchanged.

MICHIGAN SMOKE FREE AIR LAW

On May 1, 2010, Michigan’s Smoke-Free Air Law became a reality. Michigan residents and visitors will be protected from exposure to second hand tobacco smoke in all restaurants, bars and businesses.

The following link will provide you with more information in detail about the law. This includes frequently asked questions, tools for businesses to comply with the law, and tobacco dependence and treatment information.
