**WHAT'S THE DIFFERENCE?**

Social distancing, self-monitoring, self-quarantine, monitored quarantine, self-isolation

---

**Social distancing**
We should all be practicing social distancing. It helps protect everyone in our community, especially those who are most vulnerable.

---

**Individuals can:**
- Keep six feet between people as much as possible.
- Get curbside pick up for groceries or restaurant orders instead of going inside.
- Use online or drive-through services at the bank.
- Avoid public places at their busiest times.
- Avoid getting together in large social groups.

---

**Businesses & organizations can:**
- Have employees tele-work.
- Limit in-person meetings and travel.
- Modify operations to provide more online options and restrict people from gathering.

---

**Who should do it?**

**What is it?**

---

### Self-monitoring
- People without symptoms, but who had a low-risk exposure like being in an airport or restaurant at the same time as someone with a confirmed case of COVID-19.
- Practice social distancing.
- Check & record your temperature 2x a day and watch for symptoms.
- If symptoms develop, CALL your doctor to explain symptoms and possible exposure before going in.

---

### Self-quarantine
- People without symptoms, but who have a higher potential of becoming sick because of where they traveled or having had contact with someone being tested for COVID-19.
- Stay home 24/7 and self-monitor for 14 days.
- Family and roommates should practice social distancing.
- If you become symptomatic, family and roommates should also go into self-quarantine.

---

### Monitored quarantine
- Travelers from China or Iran and close contacts of people who have tested positive for COVID-19.
- Same steps as self-quarantine
- Plus report your twice daily temperatures and symptoms to the Health Department during your 14 days of quarantine.

---

### Self-isolation
- People sick with symptoms of COVID-19 but not sick enough to be hospitalized.
- Stay in a separate room from the rest of their household members.
- Use a separate bathroom if possible.
- Family and roommates should avoid contact with sick person and practice self-quarantine.
- Wear a mask if you go into shared spaces.
